DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121

- I. Claims 1-5 are drawn to a method for detecting an analyte via the combination of a single ligand-analyte conjugate, a ligand-green fluorescent protein conjugate, and an immobilized anti-ligand in a predefined ratio (wherein the ligand is identical in both the ligand-green fluorescent protein conjugate, and the immobilized anti-ligand), classified in class 435, subclass 7.1 for example.
- II. Claims 6-10 are drawn to a method for detecting at least two analytes in a sample via the combination of 1st and 2nd ligand-analyte conjugates, ligand-green fluorescent protein conjugates, and immobilized anti-ligands in a predefined ratio (wherein the 1st and 2nd reagents do not bind each other /cross-react), classified in class 435, subclass 7.92 for example.
- 2. The inventions are distinct, each from the other because of the following reasons:

The method inventions of I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have distinct functions, effects, and modes of operation. The method of invention I detects a single analyte in a sample with identical ligands (see claim 1 step b) while the method of invention II detected at least two analytes with dual reagents that do not cross react/screen (see claim 6 step b).

Application/Control Number: 10/765,063 Page 3

Art Unit: 1641

Therefore, the methods detect different events, which have diverse effects/functions (single analyte measurement in Group I and at least two analyte measurement in Group II) and utilize diverse reagents (single reagents in invention I and at least two reagents in invention II) therefore the inventions are diverse and distinct (different method limitations). They each require separate search and consideration with respect to the prior art and are therefore subject to restriction.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Please note that the classifications in the restriction are illustrative only and **do not** represent all the classes and subclasses which must be searched for each invention; nor is the search limited to issued US patents, but rather includes foreign patents and applications as well as literature searches.

Because these inventions are distinct for the reasons given above and the search required for all the groups is not totally inclusive, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/765,063 Page 4

Art Unit: 1641

4. A telephone call was made to Mark Nuell (36,623) on 2/2/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

- 5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
- 7. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The Group 1641 Central Fax number is (571) 273-8300, which is able to receive transmissions 24 hours/day, 7 days/week. In the event Applicant would like to fax an unofficial communication, the Examiner should be contacted for the appropriate Right Fax number.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lisa V. Cook whose telephone number is (571) 272-0816. The examiner can normally be reached on Monday - Friday from 7:00 AM - 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le, can be reached on (571) 272-0823.

Any inquiry of a general nature or relating to the status of this application should be directed to Group TC 1600 whose telephone number is (571) 272-1600.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see httpr//pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
